

Charging the Glasses

Using the cable provided, plug the barrel connector into the glasses and the USB end into any USB port. The indicator light will go on red when the glasses are charging and off when charging is complete. A full battery charge typically takes two hours.

1. Getting the Emitter Working

Connect the Emitter to your Projector or HDTV using the included cable. Make sure the cable plugs all the way into the emitter. The red LEDs on the emitter will search back and forth waiting for a signal. When the projector or TV is sending a 3D signal, the LEDs will switch to solid blue to indicate that a signal is found. If the emitter is not receiving a signal, turn on the 3D port using the manual provided with your projector or TV. If the emitter is still not working or the picture needs adjustment, see our website for the complete ESG6100 Starter Kit manual, which really is quite good and likely to solve almost any problem you may have.

2. Turning On the Glasses

Press the On/Off button. The indicator light will blink, with slower blinks indicating a more full battery. Your glasses are now on. (If not, charge the glasses.)

You may need to remove the protective plastic stickers from the front and back of the lenses and charge the glasses before use.

3. Using the Glasses

Make sure the BC100 Emitter is sending a signal. Look at the screen with the glasses, things should now be in 3D. Enjoy!
If you do not see 3D, see Charging the Glasses or Getting the Emitter Working.

Turning Off the Glasses

Press and hold the On/Off button for about one second until the blue indicator light goes on, then release and the glasses will go off;

- OR -

The glasses will shut down automatically after 5 minutes with no signal. After 6 seconds with no signal, the indicator light will blink blue every 3 seconds until power off.

Cleaning the Glasses

Use the lens cleaning cloth to gently wipe the frames and lenses. Commercial lens and screen cleaners typically work well. Avoid solutions that leave a protective finish.

Safety Tips

Do not use as sunglasses. Use only for 3D viewing. If you become uncomfortable, stop using the glasses immediately. See our website for more precautions or support.
